

Enex Technologies joins the Italian Datacenter Association (IDA)

The membership reinforces the Group's commitment to developing efficient, reliable and sustainable cooling solutions for mission-critical digital infrastructures

Treviso, 04 September 2026 – Enex Technologies, the European leader in the development and production of advanced natural refrigerant solutions for industrial, commercial and Data Centre cooling, announces its entry into IDA – Italian Datacentre Association, the Italian association that brings together manufacturers, operators and other players in the national Data Centre ecosystem.

Joining represents a new step in Enex Technologies' growth path in a strategic sector for the digital transformation and competitiveness of the country. IDA works to promote the recognition and development of a strong and efficient Data Center industry in Italy. Its objectives include strengthening the country as a location for the development of new infrastructure, simplifying construction and management processes, promoting energy efficiency and environmental sustainability, as well as developing the professionalism and skills required by the sector.

The entry into IDA takes place at a time of strong development in the Italian Data Center market. According to the Data Center Observatory of the Politecnico di Milano, in the three-year period 2023-2025, 7.1 billion euros were invested in Italy in the construction and preparation of new infrastructure. By 2028, 83 new projects have also been announced, with a potential value of more than 25 billion euros.

Enex Technologies offers a portfolio of precision HVAC and cooling solutions designed for server rooms, telecom rooms and mission-critical IT environments. The range includes air-cooled and water-cooled chillers, Close Control units, InRow solutions for high-density racks, dry coolers and heat exchangers. The technologies are designed to adapt to projects of different scales and the expertise gained in HVAC&R technologies and natural refrigerants allows Enex Technologies to support operators and developers in the creation of more resilient and sustainable digital infrastructures.

"Entering IDA represents an important opportunity for Enex Technologies to collaborate with the main players in the sector. Data Centers are a fundamental pillar of the digital economy and require increasingly efficient, reliable and sustainable technologies. We want to actively contribute to the association's initiatives, making our experience in cooling critical infrastructures available and working together with the other members to support the development of the Italian ecosystem," says François Audo, CEO of Enex Technologies.

With this membership, Enex Technologies confirms its desire to be an active part of the evolution of the sector and to contribute to the dissemination of best technological practices along the entire value chain. The entry into IDA is also part of the Group's growth strategy in the Data Center cooling segment, supported by investments dedicated to technological development, the expansion of production capacity and the presence in European markets.
